# Duct pre-filter units KPF

## Application

Duct pre-filter units KPF are built in supply air installations before rooms, which demand higher air cleanliness. KPF units extend the service life of HEPA filters, because larger dirty particles are removed by pre-filters, which are built in the system before HEPA filters.

## Description

KPF unit comprises filter of B x H x L dimensions, filter frames and bag filters of Coarse 50% - ePM1 80% filter class according to ISO 16890 (old designation G3 to F9). Filter housing is made of sheet metal, air-tight welded according to DIN 1946 and coloured in RAL 9010. Housing is fitted with connections for measuring of pressure drop. Galvanized steel sheet KPF possible (not airtight).

## Installation

Basic frames are being fitted into the KPF units via the side opening. The procedure requires 1000 mm of free space (Fig. 1). KPF housing is fitted into the duct network via the self-locking flange.

## Accessories

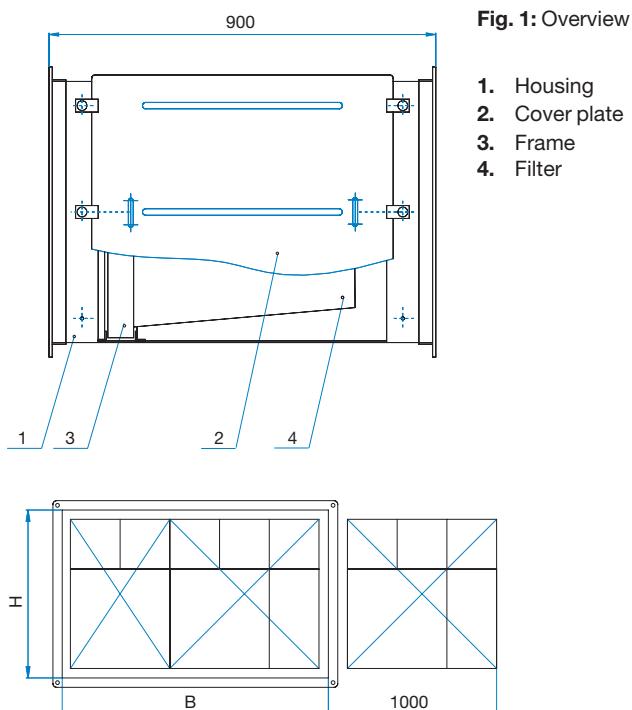

See chapter Accessories.

## Technical data

See chapter filters, subchapter Bag filters.

## Filter lifetime

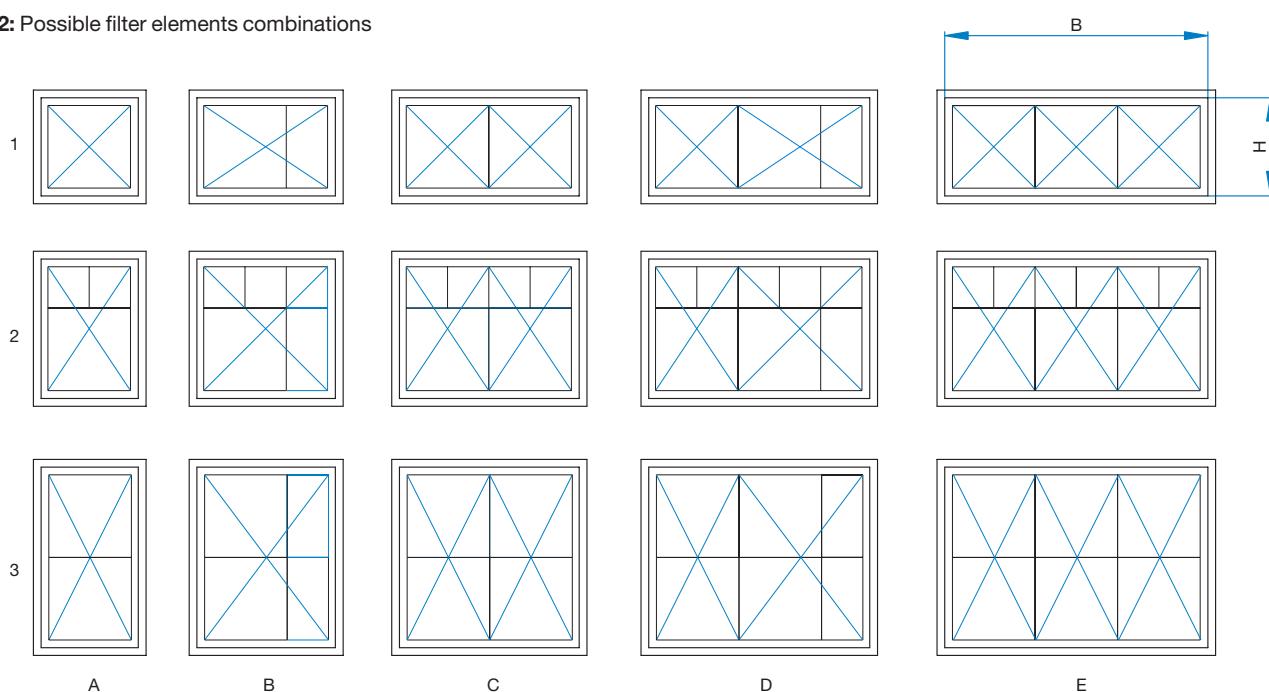

Filter pollution is controlled by means of a differential manometer. The connections for plastic tubes are already fitted on the duct pre-filter units KPF.

**Table 1:** Pre-filter unit size, quantity and size of bag filters

**Note:**

On request it is possible to produce also KPF units for other dimensions, types and classes of filters.  
Manometers have to be ordered separately.

# Duct HEPA filter units AKF

## Application

Duct HEPA filter units AKF are used in the network of inlet and outlet ducts used to supply or extract air from rooms with the highest air cleanliness requirements. They can be used for:

- air supply and extraction in laboratories,
- air supply and extraction in operating theatres, infection-free and sterile environments,
- air supply in electronics, precision mechanics, chemistry, pharmaceuticals and food industry,
- air supply in film and audio tape industry,
- air supply and extraction in nuclear technology etc.

## Description

The AKF unit is made of a filter housing with connection flanges and a HEPA filter. The filter housing is made of sheet metal, air-tight welded according to DIN 1946 and coated in RAL 9010. Two pressure gauge attachments for pressure drop measurements are fitted into the housing.

## Bag-in/Bag-out (safe filter replacement with the use of bags)

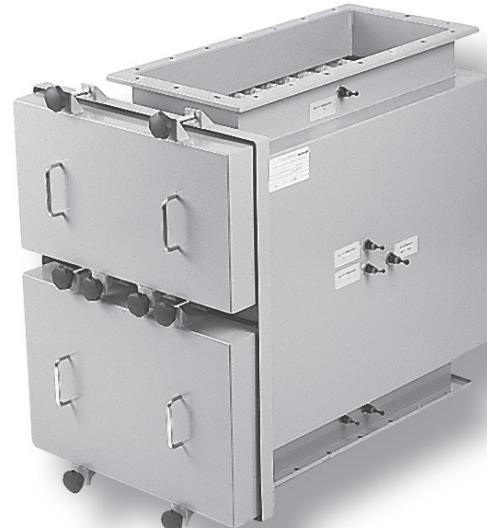

Bag-in/Bag-out is intended for filtration of air in processes during which hazardous or toxic substances are produced. The Bag-in/Bag-out system prevents any contact with the waste filter contents during replacement. The installation of a pre-filter prolongs the life of the HEPA filter. The pre-filter replacement procedure is the same as HEPA filter replacement.

## Installation and design versions

AKF housings are designed for installation of single AKF-I filter units. (Fig. 1, Fig. 2) as well as for installation of several AKF-II units (Fig. 3, Fig. 4) into the duct system. To replace the filter, 700 mm of free space is required on the front side of the unit. The AKF-II unit is made in several set-up combinations, determined by the position of connection flanges A1, A2, B1, B2 (Fig. 5, Fig. 6).

## Accessories

See chapter Accessories.

## Expected service life of HEPA filters and their replacement

HEPA filters are constructed for single use only. In AKF housing HEPA filters with semi-circular foam gasket are to be used. The expected service life of the filter depends on air-flow volume, pressure drop and amount of dust particles. Service life can be considerably increased by installing a pre-filter.

HEPA filter pollution is controlled by means of a differential manometer which can be fitted on the housing. Connections for plastic tubes are fitted on the AKF housing.

When the pressure drop reaches double its initial value, it is recommended to replace the HEPA filter. When replacing the AKF filter, remove the cover, release the lever and finally remove the frame with the used HEPA filter. When installing the new filter, use the above instructions in the opposite order.

In case of replacement of bag filters (bag-in, bag-out system), the procedure is the same with the exception of a bag attached to the extension. The waste filter is removed into a bag, which has been attached to the extension since the last replacement. The bag is then hermetically sealed so that after the separation of the part of the bag with the filter, a part of the bag remains on the extension, hermetically sealed as well. A new filter is put in a bag and then placed over the remaining part closing the duct. Upon the placement of the new bag, the remaining part of the old bag is first removed into the new bag. A new filter is installed from the new bag. The bags are attached to the extension by means of a rubber collar.

# Wall HEPA filter units AFH-1

## Application

Wall HEPA filter units AFH-1 are used in a network of inlet and outlet ducts used to supply or extract air from rooms with highest air cleanliness. The HEPA filter is fitted with a rectangular cross-section. They can be used for:

- air supply and extraction in laboratories,
- air supply and extraction in operating theatres, infection-free and sterile environments,
- air supply in electronics, precision mechanics, chemistry, pharmaceuticals and food industry,
- air supply in film and audio tape industry,
- air supply and extraction in nuclear technology etc.

## Description

The AFH-1 unit is made of a filter housing, two-row steel grille JR-5 and a HEPA filter. The sheet steel filter housing is airtight welded according to DIN 1946 and coated in RAL 9010. The grille is made of cold-drawn strip steel and coated in RAL 9010. The grille is fastened to the housing with nuts which can be screwed or unscrewed manually. The AFH-1 unit is fitted with special sealing frame for a sit-tightness test.

A stainless steel (RR-1) grille version is available upon request.

## Design variations

The sealing frame type determines three filter unit types and two HEPA filter sizes (AFH-1/1 and AFH-1/3, size 1 and 2).

## Installation

The AFH-1 unit is designed for installation in the walls of clean rooms.

## Accessories

See chapter Accessories.

## Technical data

Grille size in relation to housing and HEPA filter size is specified in Table 2.

Size and flow characteristics of HEPA filters installed in AFH-1 are specified in chapter Filters.

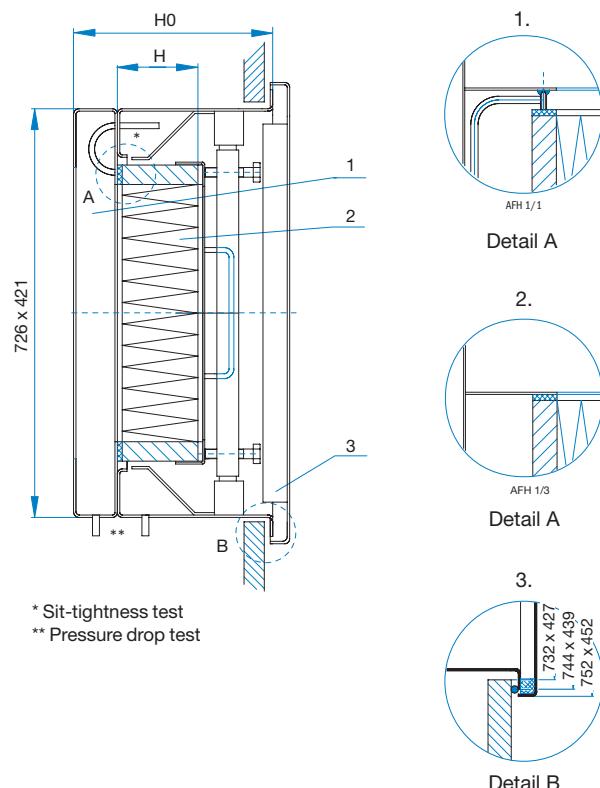

## Expected service life of HEPA filters and their replacement

HEPA filters are constructed for single use only. The expected service life of filters depends on airflow volume, pressure drop and amount of dust particles.

**Table 1:** Overview

HEPA filter unit	Application	Class
AFH - 1/1	Sit-tightness and SCAN test	E12, H13, H14
AFH - 1/3	SCAN test	E10, E11

**Fig. 1:** Overview

1. Housing
2. HEPA filter (with flat gasket)
3. Grille

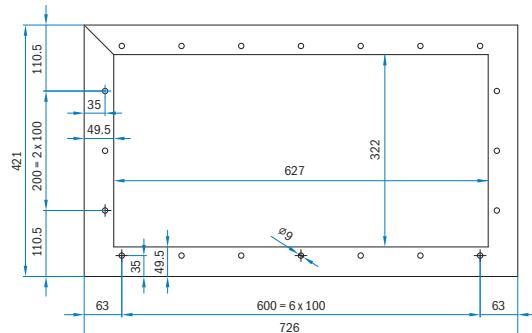

HEPA filter pollution can be controlled by means of a differential manometer which can be fitted on the housing.

Connections for plastic tubes are fitted on AFH-1 housings.

When the pressure drop has reached double its initial value, it is recommended to replace the HEPA filter. When replacing the AFH-1 filter, remove the grille and screws on the holding bar and then remove the bar together with the used filter. When installing the new filter use the above instructions in opposite order. The sit-tightness is to be tested according to DIN 1946, chapter 4. The permeability at the test pressure of 2000 Pa should not exceed the values stated in standard.

The test is carried out with a sit-tightness measuring device.

Connection flange

**Table 2:** Technical data

Nominal size	HEPA filter	H0	H1	Grille JR-5	weight AFH-1/1 *	weight AFH-1/3 *

# Ceiling HEPA filter units with flat gasket AFV-8

## Application

Ceiling HEPA filter units AFV-8 are used in supply or extract air in air conditioning and ventilation installations in rooms with the highest air cleanliness requirements. They can be used for:

- Air supply and extraction in laboratories,
- Air supply and extraction in operating theatres, infection-free and sterile environments,
- Air supply in electronics, precision mechanics, chemistry, pharmaceuticals and food industry,
- Air supply in film and audio tape industry,
- Air supply and extraction in nuclear technology etc.

## Description

The ceiling HEPA filter unit AFV-8 is made of a filter housing, standard diffusers KD-1A, KD-6, OD-8KR or OD-9KK and a HEPA filter. The filter is fitted with a rectangular cross-section washer. The sheet steel housing is airtight welded according to DIN 1946 and coated in RAL 9010. Two pressure gauge attachments for pressure drop measurement are fitted into the housing. Sheet steel diffusers are coated in white (RAL 9010). The AFV-8 housing has a special sealing frame designed to perform a sit-tightness test.

## Installation

The AFV-8 unit is constructed to fit into suspended ceilings.

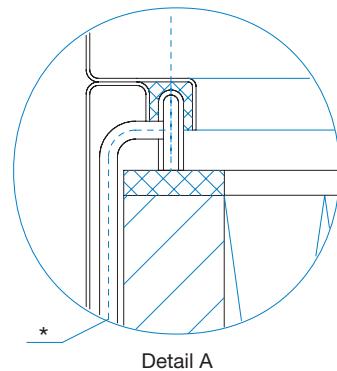

## Types

The following AFV-8 HEPA filter units are available:

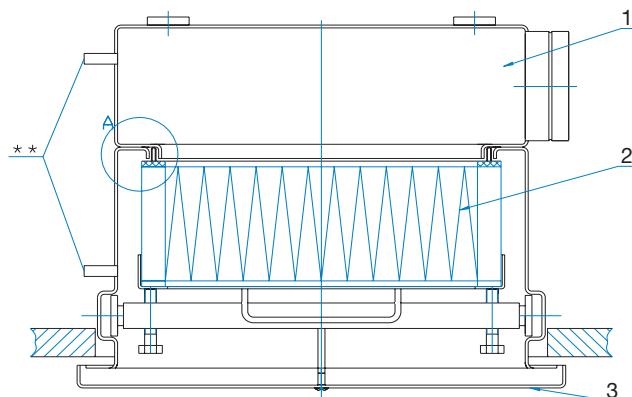

- With circular side entry spigot (AFV-8 RS) (fig. 2, table 1).
- With circular top entry spigot (AFV-8 RV) (fig. 3, table 2).
- With rectangular side entry spigot (AFV-8 KS) (fig. 4, table 3).

## Accessories

See chapter Accessories.

## AFV-8 with airtight damper ZL-3N

### Application

On the ceiling HEPA filter unit AFV-8 a shut-off damper ZL-3N is installed in the housing connection.

The advantage of the combination of an HEPA filter housing and a shut-off damper is the ability to close the shut-off damper during the filter replacement procedure to prevent room air pollution. Once the filter is replaced, the shut-off damper is reopened. This procedure eliminates the need to disinfect the room, which is mandatory in the case of replacing the filter without shutting off the inlet of non-filtered air.

**Fig. 5**

1. AFV-8/RS, RV
2. ZL-3N
3. Electric actuator (24 V or 230 V)

## Description

A galvanised sheet steel shut-off damper is mounted with four screws on the connection of the standard ceiling HEPA filter unit AFV-8. The damper may be controlled either manually or by means of an electric actuator.

## Expected service life of HEPA filters and their replacement:

HEPA filters are constructed for single use only. Expected filter service life depends on airflow volume, pressure drop and the amount of dust particles. The dirtiness of the filter is controlled with a differential manometer. Connections for plastic tubes are fitted on the AFV housing.

The initial pressure drop is specified in the chapter Filters. When the pressure drop has reached double its initial value, it is recommended to replace the HEPA filter. When replacing the AFV-8 filter, remove diffuser and screws on the holding bar and then remove the bar together with the used filter. When installing a new filter, use the above instructions in the opposite order. The sit-tightness is to be tested according to DIN 1946 standard, chapter 4. The permeability at the test pressure of 2000 Pa should not exceed the values stated in standard. The test is carried out with a sit-tightness measuring device.

## Ordering key

### AFV-8 / RS - 1 / R / KD-6 / RAL

1    2a    3b    4    5

#### 1 Type

**AFV-8** for flat filter gasket on filter

#### 2a Spigot type and placement

**RS** Circular side entry spigot  
**RV** Circular top entry spigot  
**KS** Square side entry spigot

#### 2b Adapted for filter size

**1** 305 x 305 x 150  
**2A** 457 x 457 x 78  
**2B** 457 x 457 x 150  
**3** 610 x 610 x 78  
**4** 610 x 610 x 150  
**5** 610 x 610 x 292

#### 3 Air volume regulation

**R** Airtight damper ZL-3N - with manual control, adjustable from outside\*  
**Z1** Airtight damper ZL-3N - with 24 V actuator  
**Z2** Airtight damper ZL-3N - with 230 V actuator

#### 4 Diffuser type

**KD-1A** Square 4-way diffuser  
**KD-6** Perforated diffuser  
**OD-8KR** Swirl diffuser  
**OD-9KK** Swirl diffuser

#### 5 Finish

**RAL** Housing and diffuser coated in RAL 9010  
**INOX** Housing coated in RAL 9010, diffuser made from AISI 304

**Table 5:** Dimensions of AFV-8 with shut-off damper ZL-3N

AFV-8	HEPA filter	ZL-3N		
		ϕD	size	A
<b>1</b>	305 x 305 x 150	148	150	195
<b>2A</b>	457 x 457 x 78	198	200	195
<b>2B</b>	457 x 457 x 150	198	200	195
<b>3</b>	610 x 610 x 78	198	200	195
<b>4</b>	610 x 610 x 150	298	300	195
<b>5</b>	610 x 610 x 292	348	350	195

#### Note:

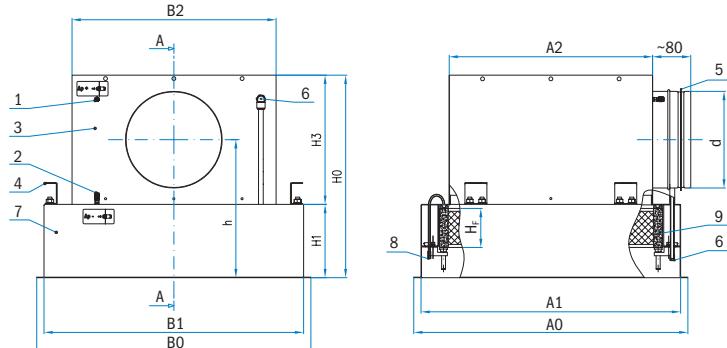

Filter is not included and must be ordered separately.

\* Airtight damper ZL-3N is possible only with version RS and RV.

# Ceiling HEPA filter units with semicircular or U-shaped gasket AFV-8B

**AFV-8B/F/\_R\_-S** (side entry spigot)

## Description

- General description: air supply for the highest standards of air purity,
- Filter: E10...H14 class (EN 1822:2009),
- Front plate: KD-1A, KD-6, OD-5, OD-9KK, OD-15KK, SR-4, OD-8KR
- (PO) semicircular (foam) gasket or (U) U-shaped profile,
- Suitable for: air supply in laboratories, infection-free and sterile departments, electronics, precision mechanics, pharmaceuticals, chemistry, food, film and audio tape industry.

## Material and surface protection

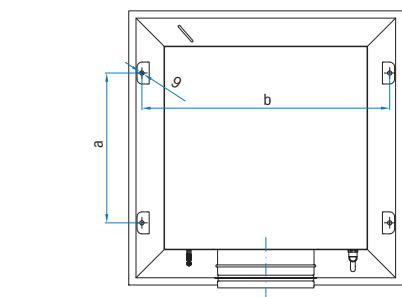

- Filter housing, diffuser and spigot connection housing made of cold rolled steel,
- Holding brackets made of stainless steel,
- Filter holders made of galvanized steel.

Stainless steel filter units are available upon request.

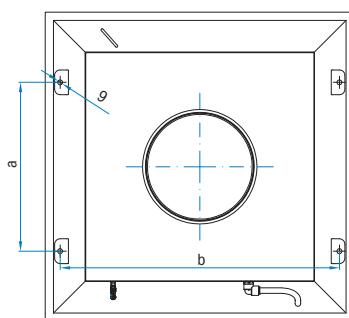

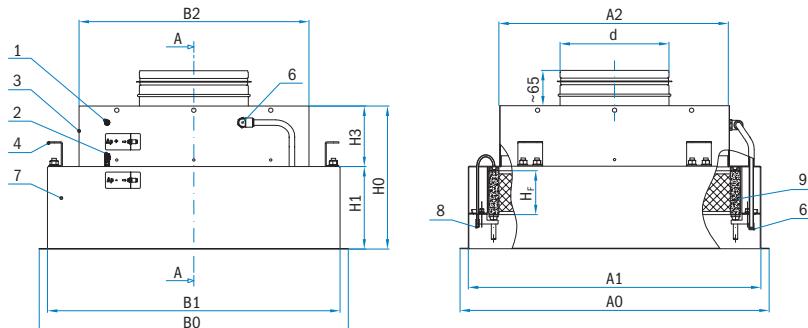

The filter housing and the front plate are powder coated in RAL 9010. Other RAL colours are available on request.

## Accessories

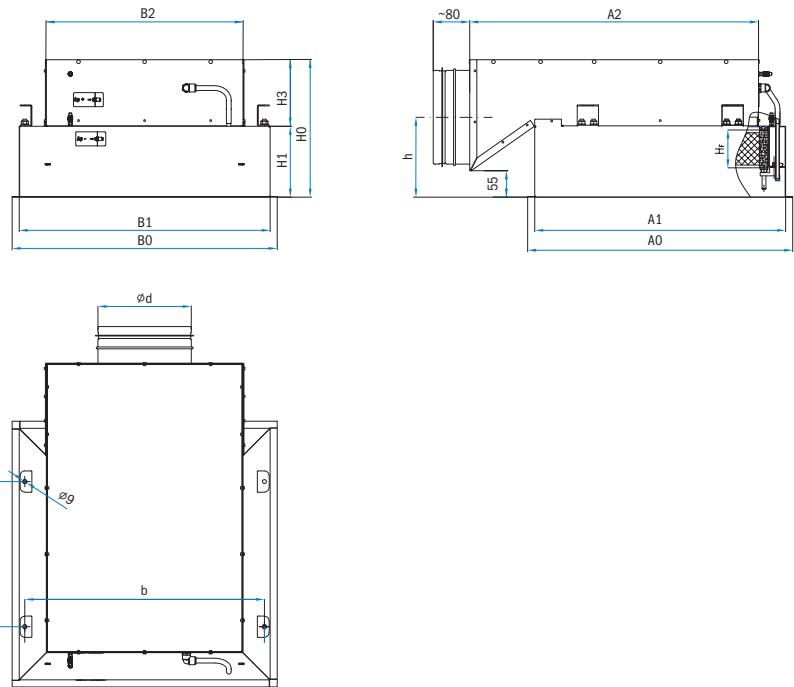

See chapter Accessories.

**AFV-8B/F/\_R\_-V** (top entry spigot)

- Differential pressure connection in front of filter +  $\Delta p$  (dia. 6/4 mm).
- Differential pressure connection after filter –  $\Delta p$  (dia. 6/4 mm).
- Spigot connection housing
- "O" hangers or "T" traverse
- Rubber lip sealing
- Connection (UPSTREAM) for scan test (dia. 8/10 mm).
- Filter housing
- Connection for filter tightness test (DIN 1946-4)
- Filter.

**AFV-8BF\_R\_-N - lowered housing version**

#### Note:

- Total weight = weight of front plate + weight of housing + weight of filter.
- Deviation of weight is ±10 %.

#### Detail: Filter gasket type

(U) U-shaped profile:

- Filter tightness test (DIN 1946-4)
- Measuring tube size ø4 mm on the housing allows pressure tapping for filter tightness test (position 8)

(PO) Semicircular shaped profile:

- The housing does not have a measuring tube for pressure tapping for filter tightness test

#### Detail: Filter and diffuser front plate fixing

The front plate is mounted with screws to caged nuts (position 10) on filter housing. The filter is fixed in place with a pressure screw on filter holders (position 11 and 17). Filter frame height can be from 69 up to 80 mm.

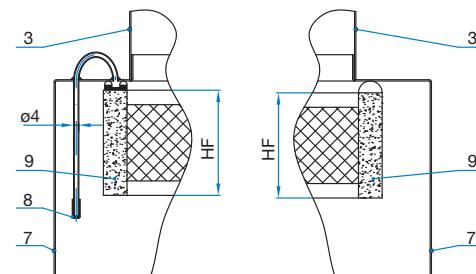

#### Detail: UPSTREAM connection for scan test

The housing has an UPSTREAM connection (position 6) size ø8 mm for scan test. This allows you to measure the concentration of MPPS size aerosol particles on the dirty side of the filter and to confirm filter efficiency and filter housing tightness.

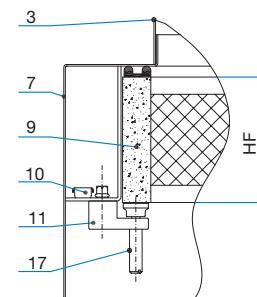

It can also be used to monitor differential pressure upstream of the filter + Δp.

**Fig. 1**

## Installation: "O" hangers

When using "O" hangers, the first step is to mount four threaded rods diameter 8 mm (position 12) to the fixed ceiling according to dimension a and b from Table 1 in place of the AFV-8B final position. The second step is to make a B1+10 / A1+10 sized opening in the suspended ceiling to fit the filter housing (position 7). The final step is to place a sealant on the interface of the filter housing and the suspended ceiling and secure it in place with a nut (position 13) and a spring washer (position 14) on the threaded rod.

## Installation: "T" traverse

When using "T" traverse, the first step is to make a B1+10 / A1+10 sized opening in the suspended ceiling to fit the filter housing (position 7). Then place a sealant on the interface of the filter housing and the suspended ceiling, attach the traverse (position 16) on the filter housing and secure it to the suspended ceiling. The thickness of the suspended ceiling can be from 15 to 50 mm, other thicknesses on request.

## Regulation:

First install the filter and lock it into place. Then loosen the screw for the hatch blocker (position 5) and move the regulation hatch (position 1) into place with the regulation axis (position 3). Then tighten the screw for the hatch blocker (position 5) and install the diffuser front plate.

## Housing size:

Standard air volume regulation can be chosen only for filter sizes F10, F20, F30, F40, F50.

## Material and surface protection:

- filter housing, bottom plate and spigot connection housing made of cold-rolled steel,
- holding brackets and regulation axis made of stainless steel,
- detachable air volume regulator made of galvanized sheet steel,
- filter holders made of galvanized engineering steel.

Other materials are available upon request.

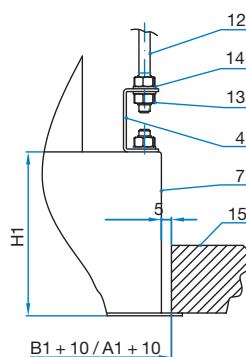

The filter housing and the diffuser front plate are powder coated in RAL 9010, 30 % gloss. Other RAL colours are available upon request.

## Dimensions and weight 1,2

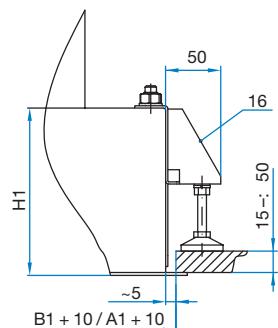

- 1) The whole weight is the sum of the weight of the diffuser front plate, housing, filter and additional weight of the air volume regulator specified in Table 2.
- 2) The deviation of weight is  $\pm 10\%$ .

**Fig. 2**

# Ceiling HEPA filter units with gel gasket AFV-8G

## Application

Ceiling HEPA filter units with gel gasket AFV-8G are installed in ventilation and air conditioning systems in rooms which require absolutely clean air. They can be used for air supply and air extraction.

- Air supply and extraction in laboratories,
- Air supply and extraction in operating theatres, infection-free and sterile environments,
- Air supply in electronics, precision mechanics, chemistry, pharmaceuticals and food industry,
- Air supply in film and audio tape industry,
- Air supply and extraction in nuclear technology etc.

## Description

The ceiling HEPA filter unit with gel gasket AFV-8G is made of a filter housing, standard diffusers KD-1A, KD-6, OD-8KR, OD-9KK or OD-15KK and a HEPA filter. The sheet steel housing is air tight welded according to DIN 1946. Diffusers are made of sheet steel and powder coated with epoxy paint in white (RAL 9010). The AFV-8G housing has a special sealing frame designed to fit "gasket" filters.

## Advantages of a gel gasket:

With a liquid sealant, the force necessary to hold the filter is smaller, compared with neoprene washers, permitting a lighter and cheaper housing and faster filter replacement.

## Installation

The AFV-8G unit is constructed to fit into suspended ceilings.

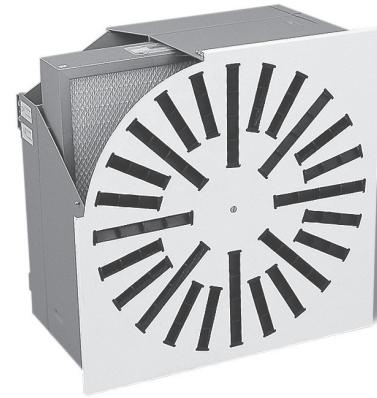

## Types

The following ceiling HEPA filter units with gel gasket are available:

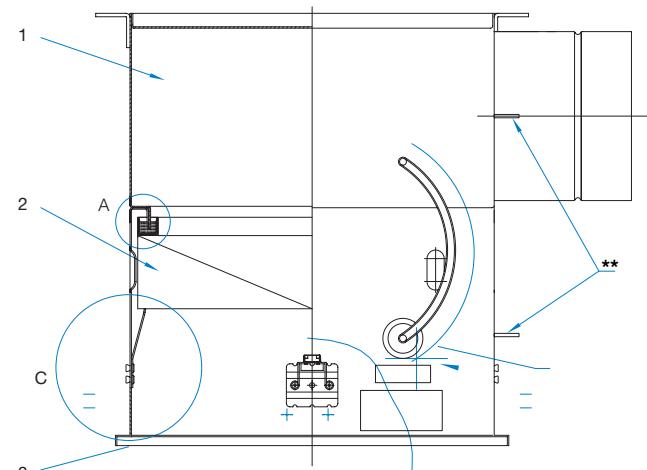

- With circular side entry spigot (AFV-8G/RS) (fig. 2, table 1),
- With circular top entry spigot (AFV-8G/RV) (fig. 3, table 2),
- With rectangular side entry spigot (AFV-8G/KS) (fig. 4, table 3).

## Accessories

See chapter Accessories.

## Diffuser types

- Sheet steel coated in RAL
- Stainless sheet steel (except KD-1A)
- Standard deflector colour is black

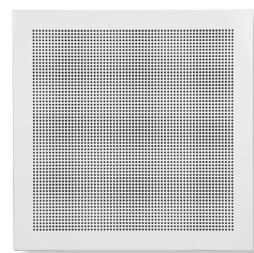

## Technical data

Available combinations of diffuser size in relation to the size of the filter unit and the HEPA filter are specified in Table 4. Mounting dimensions of diffusers to be installed in AFV-8G are specified in Tables 1, 2, 3 and in column A.

OD-9KK

OD-15KK

## Technical data for HEPA filters

Size and flow characteristics of HEPA filters installed in AFV-8G are specified in the chapter Filters.

In case filters operate under the air flow volume larger or smaller than the nominal air flow, the pressure drop is increased or decreased, respectively.

## AFV-8G with airtight damper ZL-3N

### Application

On the ceiling HEPA filter units with gel gasket AFV-8G a shut-off damper ZL-3N is installed in the housing connection. The shut-off damper ZL-3N conforms to the EN 1751 class 4 standard requirements.

The advantage of this combination of an HEPA filter housing and a shut-off damper is the ability to close the shut-off damper during the filter replacement procedure to prevent room air pollution. Once the filter is replaced, the shut-off damper is re-opened. This procedure eliminates the need to disinfect the room, which is mandatory in the case of replacing the filter without shutting off the inlet of non-filtered air.

### Description

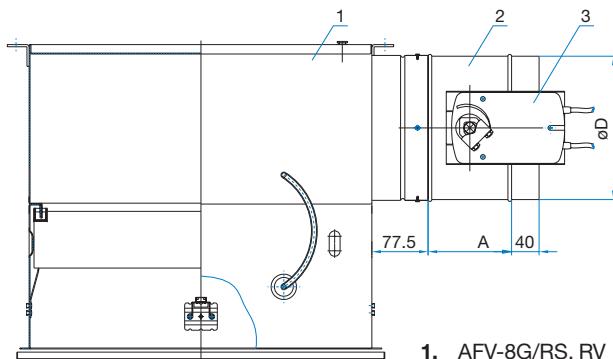

A galvanised sheet steel shut-off damper is mounted with four screws on the connection of the standard AFV-8G unit. The damper can be controlled either manually or by means of an electric motor.

### Expected service life of HEPA filter and their replacement

HEPA filters are designed for single use only. The expected service life of the filter depends on airflow volume, pressure drop and amount of dust particles. When the airflow volume is reduced by 25%, the expected service life of the HEPA filter doubles. The service life can be considerably increased by installing a pre-filter. The dirtiness of the filter is controlled with a differential manometer. Connections for plastic tubes are fitted on the AFV-8G housing.

The initial pressure drop is specified in the chapter Filters. When the pressure drop reaches double its initial value, it is recommended to replace the HEPA filter. When replacing the AFV-8G filter, remove the diffuser and press the springs to unlock the filter and remove it (fig. 1, detail C). When installing the new filter, press the filter frame until mounting spring lock at the bottom of the filter frame.

\* Air tight damper ZL-3N is possible only with version RS and RV.

# Ceiling HEPA filter units LFH

## Description

The LFH filter housing is a clean room diffuser, which can be equipped with a HEPA filter. It is designed for installation in ceilings in premises with stringent requirements concerning the amount of particles and germs in the air. LFH is typically used for fresh air supply from the ceiling.

## Features

- Customers can select from 6 different diffuser front plates, depending on visual design preference, throw requirements or intended purpose. Diffusers allow mixing (swirl and non-swirl) or displacement ventilation.
- 2 housing types with different heights enable installation of various filters with heights from 48 mm up to 150 mm.
- 10 different sizes of filter media can be installed.
- 2 gasket types:
  - semicircular foam gasket
  - liquid gel gasket
- 3 possible duct connections:
  - circular side connection
  - circular top connection
  - rectangular side connection

Standard connections for areosol (DOP) leakage testing and for filter differential pressure measurements are available. LFH filter housings are airtight.

Optional accessory: shut-off damper (manual or motorized) for optimum conditions during filter replacement.

The LFH quick selection table offers basic technical parameters required for designing clean room technology.

Customized and non-standard versions are available upon request.

## Materials and components

### Upper section:

Material: Steel / epoxy powder coated or stainless steel EN 1.4301 / AISI 304

### Lower section:

Material: Steel / epoxy powder coated or stainless steel EN 1.4301 / AISI 304

Standard colour: RAL 9010

### Front plate:

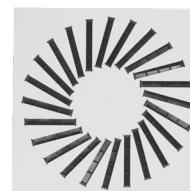

Material: Steel / epoxy powder coated or stainless steel EN 1.4301 / AISI 304

Standard colour: RAL 9010

### Diffuser front plate versions:

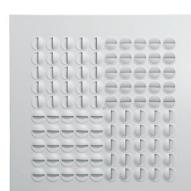

S1R

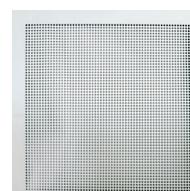

S2R

S3R

S4R

P1R

4WR

### Gasket:

Liquid gel gasket

Semicircular foam gasket

### Filters:

LFH is a versatile filter housing, making it possible to install various filter types with different heights and filter frame materials. If the filter type or supplier is not specified in the order specifications, a standard OC IMP Klima filter is supplied with the unit by default.

## Filter data

Filter efficiency of all filters is compliant with class H14 acc. to EN 1822.

### Filter frame PU 69 mm / GEL 80 mm

Suitable for LFH housing type 1.

Filter frame height: 69 mm PU foam gasket, 80 mm GEL (liquid) gasket.

Filter size [mm]	Nominal airflow [m³/h]	Initial pressure drop [Pa]
305x305	150	125
305x610	300	125
457x457	340	125
535x535	470	125
610x610	600	125
610x915	900	125
610x1220	1200	125
535x1135	980	125
762x762	930	125
915x915	1470	125

### Filter frame PU 150 mm

- Suitable for LFH housing type 2.
- Filter frame height: 150 mm PU Foam gasket

Filter size [mm]	Nominal airflow [m³/h]	Initial pressure drop [Pa]
305x305	150	80
305x610	300	80
457x457	340	80
535x535	470	80
610x610	600	80

### Filter frame GEL 128 mm

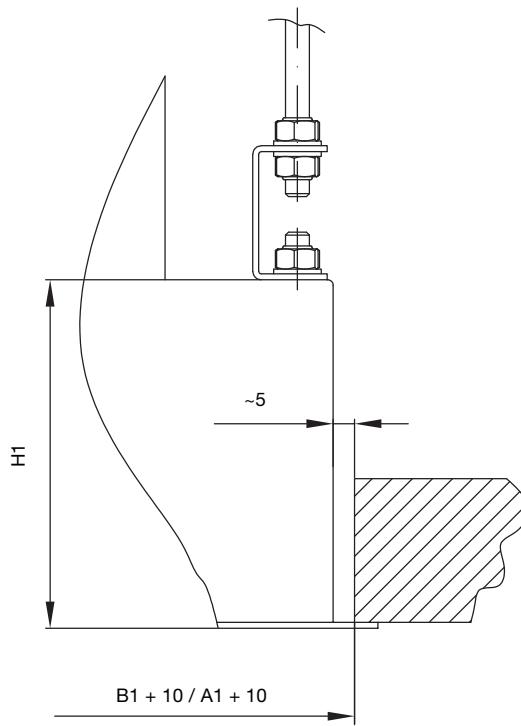

- Suitable for LFH housing type 2.
- Filter frame height: 128 mm GEL (liquid) gasket

Filter size [mm]	Nominal airflow [m³/h]	Initial pressure drop [Pa]
305x305	150	80
305x610	300	80
457x457	340	80
535x535	470	80
610x610	600	80

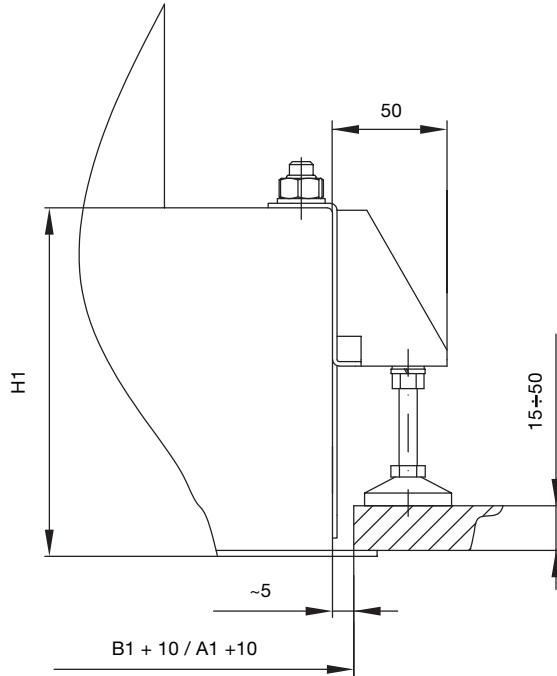

## Installation

Installation is possible with hangers (H) into suspended ceilings or with traverse (T) for installation into fixed panels, see installation manual for detailed instructions.

### Hanger installation (H)

### Traverse installation (T)

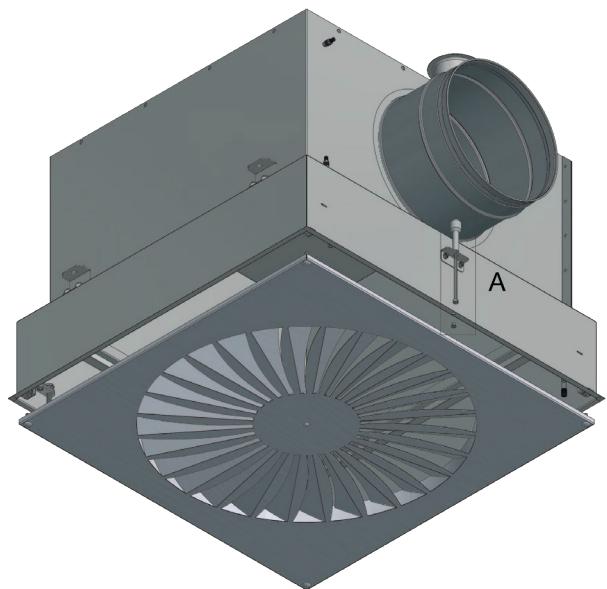

## Manual air tight damper R, adjustable from room side

Version R of the airtight damper can be manually opened or closed from room side, without any intervention in the ceiling or need for an inspection opening.

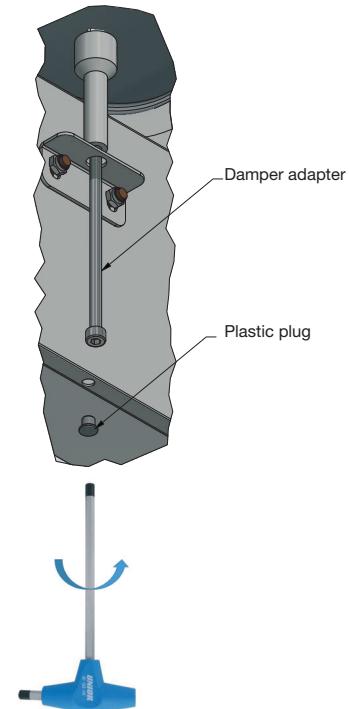

The airtight damper can be adjusted by simply turning the damper mechanism with a regular hex key through the opening in the filter housing frame.

This feature significantly simplifies maintenance and filter replacement from the room where the housing is installed.

## Damper adjustment element

## Turning the damper blade with a hex key

# Operating theatre ceiling – perforated version DPS-N

## Application

The DPS-N laminar supply ceiling with high-efficiency filters is used in clean rooms which require clean air as well as laminar airflow in the working area. They are designed to be built into suspended ceilings of OP rooms and intensive care units to ensure a laminar flow of clean air into the target zone. DPS-N is suitable for OP rooms class 1b as defined in DIN 1946-4.

## Description

The coarse and fine filtration of the air for the operating theatre takes place in an air handling unit according to DIN 24185. The filtered supply air is distributed to the high-efficiency filter on the DPS-N plenum box. The air is discharged from the pressure chamber into the OP theatre via the perforated ceiling plates. The temperature of the discharged air must be 1° to 3 °C lower than the average room temperature. Two thirds of the air current should be extracted from the room via the floor and one third via the ceiling. The air current which is being discharged from the DPS-N flows over the entire area under the ceiling thus preventing the surrounding air from penetrating within the operating area (fig. 1).

## DPS-N Material, surface protection and assembly

- The housing of DPS-N operating ceilings is made of disinfectant-resistant cold rolled steel, powder coated in RAL 9010, or stainless steel AISI 304 (INOX).
- On request, the ceiling contains a transition for the operating light. In this case, a blind plate and a plate with a round opening of ø150 mm.
- The perforated plates are attached with hinges on one side and locks on the other side.
- The DPS-N laminar ceiling is fitted with HEPA filters inserted above the perforated mask over the entire surface. The dimensions of the connection spigot and weights are given in Table 2.
- The inside of the ceiling is fitted with filter pressure drop measurement connections (the difference between the pressure upstream and downstream of the filter, which indicates the dirtiness of the filter) and with a SCAN test connection.
- DPS-N is mounted to the concrete ceiling with threaded bars and inners for the concrete.
- The pressure chambers are made of two or three parts, which are screwed together at the installation site. In the assembly operations the connections are additionally packed with acrylic putty, which is attached to the ceiling.

# Operating theatre ceiling – textile version DSS-N

The DSS-N ventilation ceiling with polyester textile is used for air supply in hospitals where a high air exchange rate is required. It is intended to be built into suspended ceilings in operating theatres and intensive care facilities. DSS-N is suitable for OP rooms class Ib as defined in DIN 1946-4.

## Description

DSS-N is based on a standard DPS-N perforated ventilation ceiling whose panels are replaced with synthetic textile affixed to stainless steel frames. The ceiling and filter housing is made of either stainless steel or epoxy coated sheet steel.

The synthetic textile allows laminar flow, as the tight weave of the fibers prevents turbulent flow from forming on the surface. The polyester textile is DIN 4799 compliant in terms of minimum hygienic requirements for operating rooms. Moreover, it has all the necessary certificates for use in operating theatres, as well as high resistance to aggressive disinfectants. The synthetic textile may be single-layer or double-layer. The second layer allows the air to be evenly distributed across the entire surface before it enters the room.

The units are made of one, two or four parts, depending on size. All elements are assembled with screws on site.

The supply ceiling is also available with a transition for an operation light with dimensions of 300 x 300 mm. In this case a plate with a round opening for the lamp is attached.

The synthetic mask is fastened with screws which require no special tools.

Depending on project requirements, side or top duct connections are available. The dimensions of the connecting ducts and the number of filters are specified in the table. Inside are connectors for measuring the pressure drop on filters (the difference between the pressure upstream and downstream of the filter, which indicates the dirtiness of the filter), as well as a connection for the SCAN test.

In accordance with applicable standards, a scan test must be performed after each filter replacement.

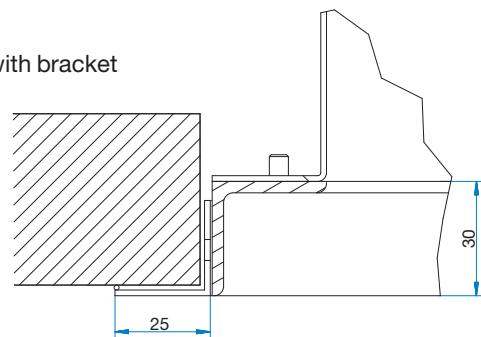

## Accessories

See chapter Accessories.

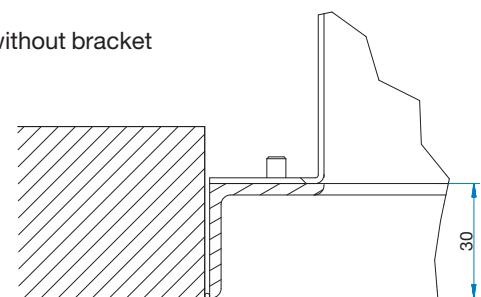

## Installation

Z - installation with bracket

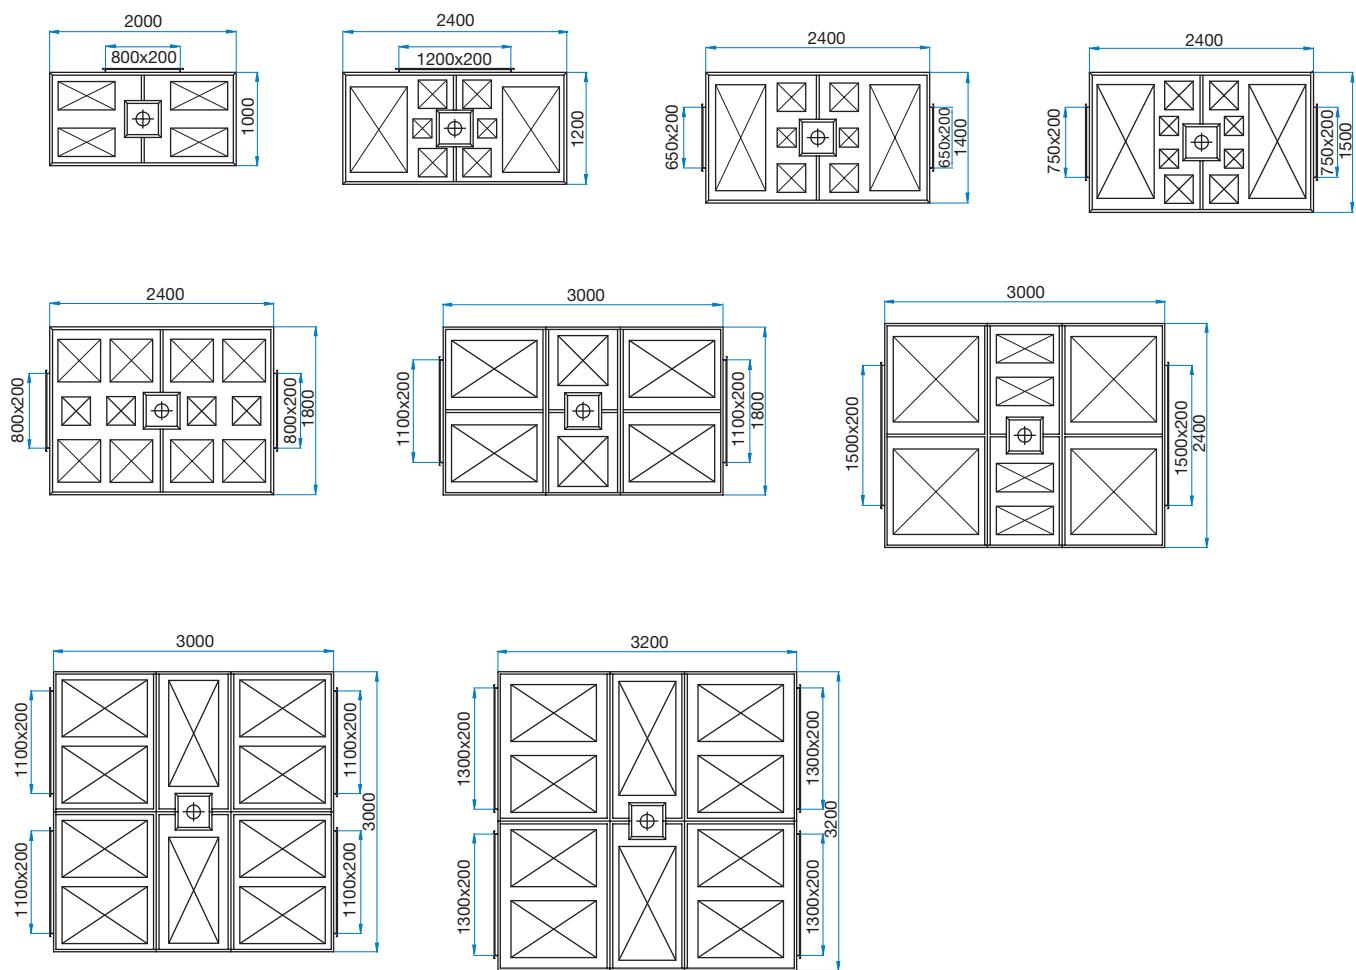

X - installation without bracket

# Fluff separator LN-1

## Application

The fluff separator is an air exhaust grille designed for wall mounting in rooms with special air purity demands (operating theatres, computer centres, ...). It is primarily used for air exhaust.

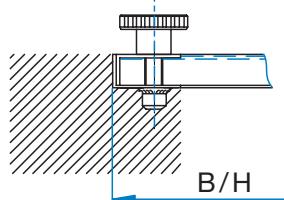

## Description

The grilles are made of stainless (grinding) sheet steel. The grille face consists of a frame with a densely woven stainless mesh welded on.

A filter (LN-1/filter) or an airflow rate adjustment stainless steel insert F (LN-1/F) can be placed on the installation frame. (To adjust the insert, remove the grille face.) The front plate is fastened on the installation frame with a stainless steel screw.

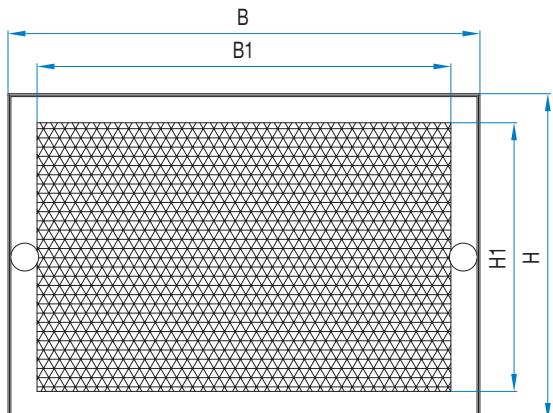

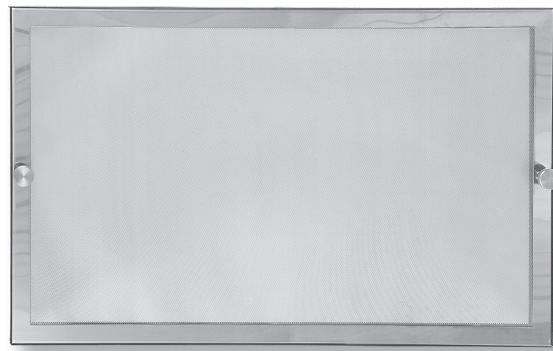

## Installation

The grille may be mounted flush with the wall face.

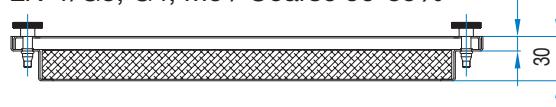

## Filter insert cleaning and replacement

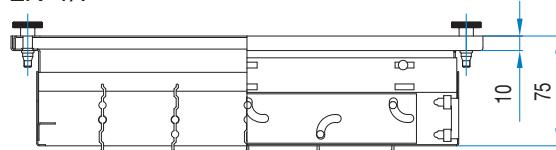

Due to the build-up of impurities, the grille must be removed and cleaned. Loosen the grille face screw and simply remove the grille face from the installation frame. With the LN-1/filter variant, remove the filter insert from the frame and replace it with a new insert.

# Fluff Separator LN-2

## Application

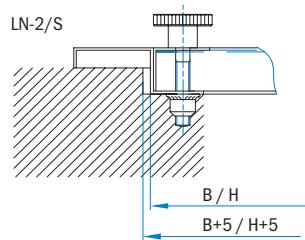

The fluff separator is an air exhaust grille designed for wall mounting in rooms with special air purity demands (operating theatres, computer centres, ...). It is primarily used for air exhaust.

## Description

The grilles are made of stainless (grinding) sheet steel. The grille face consists of a frame with a densely woven stainless mesh welded on.

A filter (LN-2/filter) or an airflow rate adjustment stainless steel insert F (LN-2/F) can be placed on the installation frame. (To adjust the insert, remove the grille face). The front plate is fastened on the installation frame with a stainless steel screw.

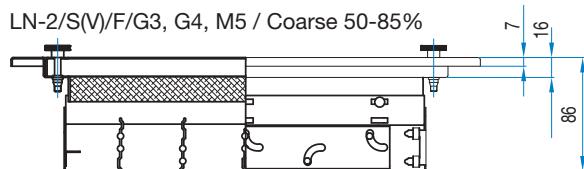

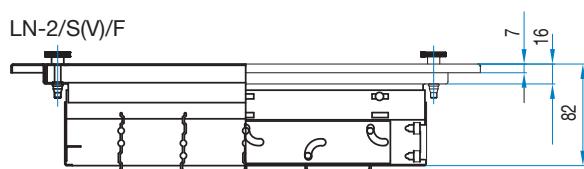

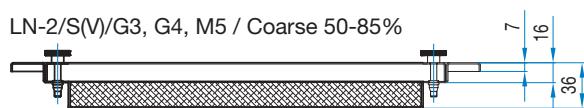

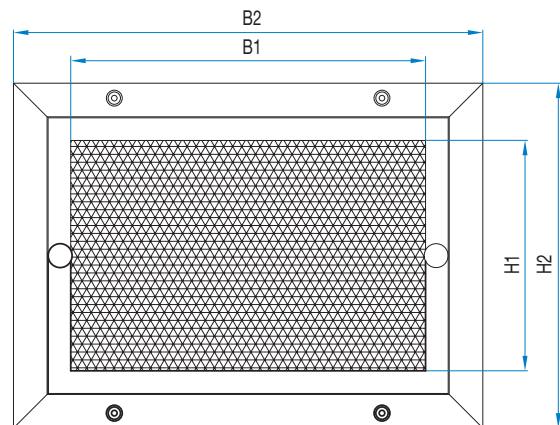

## Installation

## Filter insert cleaning and replacement

Due to the build-up of impurities, the grille must be removed and cleaned. Loosen the grille face screw and simply remove the grille face from the installation frame.

With the LN-2/filter variant, remove the filter insert from the frame and replace it with a new insert.

# Filter grille FR

## Application

Filter grilles are intended for wall installation in rooms which require a higher level of air purity (computer centres, libraries, clean rooms, etc.). They are primarily used to extract air from the room.

## Description

The grilles are made of stainless (polished) sheet metal. The installed filter is of the Coarse 50% - Coarse 85% filter class according to ISO 16890 (old designation: G3, G4 or M5).

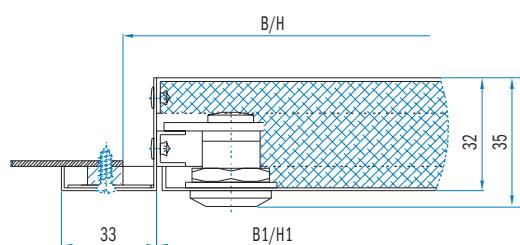

## Dimensions

Standard grille dimensions are 225 x 225 mm to 625 x 625 mm. Grille depth is 35 mm. Other dimensions available on request.

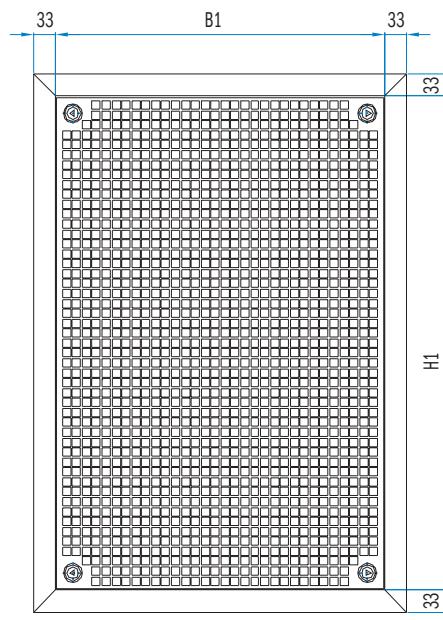

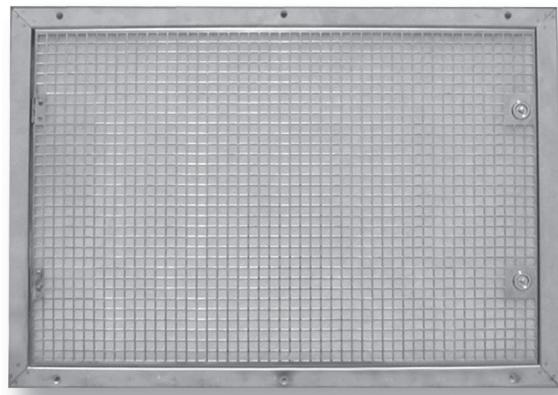

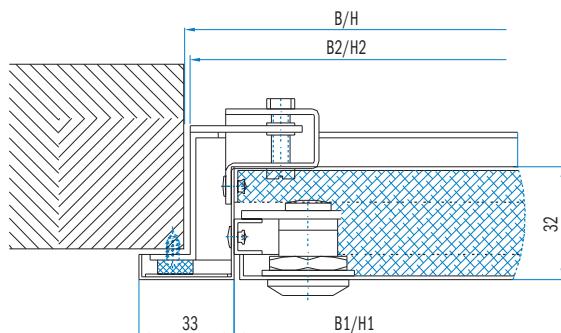

## Installation

Grilles may be fixed with visible screws (designation V, screws on the grille frame) or hidden into the installation frame (designation 2, grille is fastened on the installation frame with a lock on the internal side of the grille. The installation frame must be fixed on the wall before the installation of the grille.)

### 1. with screws (designation V)

### 2. on the installation frame (designation 2)

## Filter replacement

Filters must be replaced once the louvre pressure drop increases due to dirt trapped in the filter. The filter replacement is a quick and simple procedure. Use the lock to open the grille and replace the dirty filter with a new one. Then close the mask with the lock.

## Liquid gasket, GEL

- filter version: standard HEPA filter for clean rooms (ceiling installation)
- manufacturer: American Air Filter
- frame material: aluminum
- temperature limit: 70 °C
- max. final pressure: 500 Pa, recommended final pressure drop 2x initial pressure drop
- suitable for: AFV-8G, LFH

**Picture 1:** Filter drawing H-H14/G/ALU/AAF/F\_

<b>Electrical connection</b>	/	/	8 wire cable	male 15 pin d-Sub	screw terminals
<b>Operative voltage</b>	/	/	24 VDC±10 %	12-28 VDC or 12-28 VAC 50-400Hz	<b>High voltage power:</b> from 100 to 240 VAC 50 to 400 Hz or from 132 to 240 VDC  <b>Low voltage power:</b> 24 VDC ±20 %
<b>Relay</b>	/	/	<b>Switch type:</b> each setpoint has a solid state relay  <b>Switching voltage:</b> 20-280 VAC (47-63 Hz)  <b>Switching current:</b> 0.01 – 1 A	<b>Switch type:</b> 2 SPDT relay  <b>Electrical rating:</b> 1 A @ 30 VAC/VDC	<b>Switch type:</b> 2 SPDT relay  <b>Electrical rating:</b> 8 A @ 240 VAC
<b>Agency approvals</b>	/	/	CE	CE	CE, UL
<b>Communication</b>	/	/	/	/	Modbus® RTU, RS485, 9600 baud.
<b>Output</b>	/	/	/	4-20 mA DC into 900 ohms max.	4-20 mA DC into 900 ohms max.

**Table 2:** Pressure switch table

Technical Data	AF-04/001	AF-04/002	AF-04/003
<b>Description</b>	Pressure switch	Pressure switch	Pressure switch
<b>Type</b>	QBM81-3	QBM81-5	QBM81-10
<b>Accuracy</b>	< ±2.5 Pa	< ±5 Pa	< ±10 Pa
<b>Pressure range</b>	20...300 Pa	50...500 Pa	100...1000 Pa
<b>Pressure connection</b>	Male, ø 6.2 mm	Male, ø 6.2 mm	Male, ø 6.2 mm
<b>Standard accessories</b>	/	/	/
<b>Temperature range</b>	- 30 ... + 84 °C	- 30 ... + 84 °C	- 30 ... + 84 °C
<b>Housing material</b>	Polycarbonate, PVC, ABS	Polycarbonate, PVC, ABS	Polycarbonate, PVC, ABS
<b>Electrical connection</b>	3 screw terminals	3 screw terminals	3 screw terminals
<b>Operative voltage</b>	/	/	/
<b>Relay</b>	<b>Switch type:</b> single-pole change-over  Switching voltage and current: AC/DC 24 V ≥ 0,01 A AC 250 V, ≤ 5 (0,8) A	<b>Switch type:</b> single-pole change-over  Switching voltage and current: AC/DC 24 V ≥ 0,01 A AC 250 V, ≤ 5 (0,8) A	<b>Switch type:</b> single-pole change-over  Switching voltage and current: AC/DC 24 V ≥ 0,01 A AC 250 V, ≤ 5 (0,8) A
<b>Agency approvals</b>	CE conformity to (Low-voltage directive 2006/95/EC)	CE conformity to (Low-voltage directive 2006/95/EC)	CE conformity to (Low-voltage directive 2006/95/EC)
<b>Communication</b>	/	/	/
<b>Output</b>	/	/	/

**Picture 1:** Pressure switch function diagram and connection terminals

### Legend:

- 1 Phase
- 2 Switch position 1-2: lower pressure
- 3 Switch position 1-3: higher pressure
- $X_0$  Switching difference
- $\Delta p$  Pressure difference
- W Switching point, top

### Ordering key

Keys for locks	01/001	DPS
	01/002	FR
Pressure gauge	02/001	Mark II
	02/002	Magnehelic 0-250 Pa
	02/003	Magnehelic 0-500 Pa
	02/004	Magnehelic 0-750 Pa
	02/005	Magnehelic 0-1000 Pa
	02/006	Magnehelic 0-1500 Pa
	02/007	Photohelic 0-500 Pa
	02/008	Photohelic 0-750 Pa
	02/009	Photohelic 0-1000 Pa
	02/010	Dighelic 0-622.75 Pa
	02/011	Dighelic 0-1245.5 Pa
	02/012	Dighelic (3-in-1) 0-1245 Pa

**Holders for pressure gauges** 03/001 02/002 – 02/006

03/002 02/007 – 02/011

03/003 02/012

**Pressure switches** 04/001 SI QBM81-3 (20-300 Pa)  
 04/002 SI QBM81-5 (50-500 Pa)  
 04/003 SI QBM81-10 (100-1000 Pa)

#### Note:

When choosing pressure gauge you have to connect it with ø6/ø4 tube.
